Subject: new ADEQ microbiologist

I just had a conversation with Dr. Chris Marks, who is in the process of completing a post doc here at Kerr lab, and will be starting a job with ADEQ in the next couple weeks. He has done research on corrosion of underground fuel storage tanks, and will be working with the underground storage tank and superfund programs at ADEQ. When I told him that at Williams they are already having problems with corrosion of pumps, and are currently injecting tons of sulfate to try to stimulate bugs that aren't there, he kind of had a look of horror. I asked if bugs survive in these corrosive environments, he said some can, not necessarily the ones you want. He might be someone who can take a fresh approach to try to deal with AMEC.
